PROJECT TITLE	: General Health Care Service
ROLE	: Developer
TECHNOLOGIES	: Spring, Spring Boot, Spring Data JPA, MySQL, RESTful Web Services
DATABASE	: MySQL

DESCRIPTION

Healthcare is a field in which accurate record keeping and communication are critical. The software has the facility to give a unique id for every patient and stores the details of every patient and the staff automatically. With the increase of demand in hospitals, we need effective data management system for handling patient's data, staff data and treatment details in an effective way. It deals with the collection of patient's information, diagnosis details, etc. It includes a search facility to know the current status of each room. User can search availability of a doctor and the details of a patient using the id.
